Wood burning stoves & Accessories

2023-2024

Aduro 9.7 Lux

adurofire.com

”You should feel the beauty of a fire in the living room.”

Casper Storm, Designer

The history of Aduro

It all started in 2005 with the wish to create the perfect fire for the living room. Hence the name Aduro. Aduro is Latin and means *to ignite or to burn*.

Today, more than **450,000 stove owners** across Europe have bought an Aduro stove. Throughout the entire history of humans, fire has been a source of heat, cosiness and socialising. Aduro would like to contribute to keeping this tradition alive. It should be easy to fire correctly - and with a good conscience.

It should no longer be rocket science to fire correctly in your wood burning stove. Our ambition was and still is to make you feel like you are firing as well in your home as a professional. The technology in our products is simply designed to help you.

We can proudly say that we make it easy to fire correctly and get the maximum benefit from your wood burning stove.

Minimalist Scandinavian design

A wood burning stove from Aduro is thoroughly designed from inside and out and from top to bottom by Danish architects and designers. Nothing is left to chance. Most often, they are designed with large glass panels and clean lines, turning the stove into a piece of designer furniture in itself. They fit into both the modern and the more traditional home. In the following pages, we will present you to the different series of wood burning stoves we offer, and in the back of the catalogue, you will find an overview of all our wood burning stoves.

Aduro wood burning stoves

- ✓ Clear view of the fire. An effective air-wash system prevents soot on the glass
- ✓ Cleaner combustion
- ✓ Comfortable and effective heating (convection)
- ✓ Great value for money due to effective production and distribution
- ✓ Get the most out of your firewood with the innovative Aduro-tronic, Aduro Smart Response and Aduro DraftOptimizer
- ✓ Simple maintenance
- ✓ 10-year warranty on delivery of original spare parts. Visit aduroshop.com
- ✓ We have everything for your wood burning stove – in one place

Experience Aduro online

We have created an inviting showroom with all our products that can both introduce, inspire and hopefully seduce you. Take a look at our large selection and get tips and tricks – whenever it suits you best.

Read what customers say about Aduro, try our 360° pictures, and get good advice on how to use your wood burning stove effectively, among other things.

We help you from the initial research to the stove is installed – and long after that.

You can also visit us on Instagram, Facebook, Pinterest and YouTube.

adurofire.com & tips.adurofire.com

Burn wisely and save up to 40%

Put firewood in the stove, ignite it and enjoy the warmth

Aduro-tronic automatically regulates the primary air in your wood burning stove after one simple pull. This means simple operation, **up to 40%* less firewood consumption**, and cleaner combustion.

The automatic device is elegantly integrated underneath the combustion chamber and works without electricity. All Aduro wood burning stoves are equipped with Aduro-tronic as a standard.

See more at adurofire.com

How does Aduro-tronic work?

1. Activate Aduro-tronic by pulling the handle.
2. The air supply is now fully open.
3. The automatic device will slowly close the air supply within approximately 6 minutes.

*Tests have shown that an Aduro 1 with an incorrectly adjusted air damper (open primary air damper) uses 40% more wood than the same stove with Aduro-tronic.

The secret to perfect combustion

Aduro Smart Response is a device with two sensors that communicate wirelessly with an app on your smartphone or tablet. In the app, you can always see when you should add more firewood, what the temperature in your wood burning stove is, and whether the stove is burning at a temperature too low or high.

With Aduro Smart Response, you can focus on other things while still operating your wood burning stove optimally. Aduro Smart Response works with all wood burning stoves, regardless of brand and model.

- Less smoke out of the chimney
- Improved combustion
- Reduced firewood consumption

The environment

Burning firewood is **CO₂ neutral** and thus does not burden the climate. At tips.adurofire.com, you can calculate how many kg of CO₂ you can save every year with a modern wood burning stove.

All Aduro stoves meet the requirements of **Ecodesign 2022**, which is an EU directive created to minimize the emission of particles and thereby improve air quality across the borders of the EU. The directive makes demands on the energy efficiency and particle emissions of the product.

Install a smoke exhauster

Get more out of your wood burning stove

Do you experience problems with ignition? Smoke in the room when you open the door to the stove? Bad combustion or smoke in the neighborhood? Then, **Aduro DraftOptimizer** is the solution. The smoke exhauster immediately ensures an even draft in the chimney and reduces smoke and smell nuisances. It is installed on top of the chimney and controlled from inside the house. Fits both old and new chimneys.

- Less smoke in the room
- Improves combustion – adjustable draft
- Less smoke out of the chimney
- Easy lighting of the wood burning stove
- 24V motor with a low energy consumption

Aduro stoves with external air supply

Wood burning stoves need a constant air supply to ensure a clean and effective combustion. However, this can be a problem in modern, energy-efficient homes, which are often very airtight. Therefore, several of our stoves are fitted with external air supply, which means that air for combustion is brought from the outside and seamlessly led directly into the stove without affecting its appearance.

Did you know?

Aduro offers a complete kit for installation of the fresh air system. The kit includes all the components necessary for a standard rear-facing installation.

Aduro 22 series

Round, slender, and elegant - these are the characteristics of the five variants in the Aduro 22 series, which are ideal for small rooms and houses. The curved glass and the soft, harmonious lines lead your eyes straight into the beautiful fire. Special characteristics for the stoves include the elegant handles and the beautifully rounded combustion chamber.

Aduro 22 | Aduro 22.3 Lux | Aduro 22.5 Lux | Aduro 22.4 Lux | Aduro 22.1 Lux

Aduro 15 series

The primary goal with the Aduro 15 series was to create a stove with a very wide combustion chamber that can accommodate logs up to 50 cm long. The elegant elliptical shape was an obvious way to widen the shape while maintaining a minimal depth. This has given the stove a very elegant appearance. Nothing disturbs the broad view of the fire, as handles and dampers for air regulation are fully integrated into the stove.

The series consists of four models that all offer effective combustion, an impressive view of the flames as well as good thermal comfort.

Aduro 15 Lux | Aduro 15.3 | Aduro 15

Aduro 9 series

Aduro 9 | Aduro 9.7 | Aduro 9.1 | Aduro 9.3

The Aduro 9 series consists of 11 models that give you the freedom to design the home of your dreams. For instance, you can choose a tall stove, one with glass on three sides, one that is wall-mounted, one on a pedestal, one with a ceramic covering, and one with heat-absorbent stones.

Aduro 17 series

Aduro 17.1 Lux | Aduro 17

The Aduro 9 Lux models are characterized by an elegant, black glass door and simple handles. The large, curved glass door catches the eye with its polished and shiny look, and the discrete appearance of the handles leaves you with an undisturbed view of the flames.

Aduro 9.3 Lux | Aduro 9 Lux Ceramic | Aduro 9.7 Lux | Aduro 9.5 Lux

With the Aduro 17 series, we have taken all the best qualities from Aduro 9 and designed a series of exclusive wood burning stoves in both black and white. The tasteful details are carefully thought out. The convection vents are integrated into the stove's natural lines, the combustion chamber itself is beautifully rounded off in the back,

the ash tray runs silently on gaskets, there are beautiful details in cast iron, and the stove is elevated on a small base. The large glass panels and simple handles give the stove an elegant finish. The Aduro 17 series is the perfect match for the modern home.

Aduro 1.1 series

The Aduro 1.1 series is a natural continuation of the steel chimney. The front is completely smooth. The door handle and the airflow adjustment handle are fully integrated into the stove, giving it a stylish and elegant look. The stove has a large, curved

glass door that allows a clear view into the flames. Aduro 1.1 is available with a drawer, in a tall edition with a firewood compartment, or covered with soapstone tiles. The series is created for you who like a simple and timeless design.
